

Flex

Best support for seated, standing and combination workplaces

bimos

Flex is the all-rounder for combination workplaces

The highlights of Flex

- infinitely variable height adjustment with a pneumatic spring
- 360° rotation
- ergonomic and comfortable backrest
- very good support thanks to anti-slip rippled seat surface
- soft, washable and durable thanks to soft-touch PU foam

Flex is the innovative solution for seated and standing workplaces

Flex offers an extra-large and infinitely variable height adjustment range, making it ideal for seated, standing and combination workplaces.

It can be adjusted with an easy-to-use pneumatic spring.

The optional foot ring can be adjusted without tools, offering perfect support at every working height.

Comfort and load capacity – are not contradictions for Flex

Flex easily bears up to the demands of a tough working environment. It is solidly built and even its upholstery can take some knocks: the soft-touch PU foam surface is soft, washable and durable.

But Flex still has a lot to offer in the way of comfort: its structured rippled seat surface guarantees adequate ventilation, the upholstery is soft and thanks to the infinitely variable height adjustment, Flex adapts to the user and workplace situation.

Flex is one of the most versatile chairs in the bimos collection. For example, it can be used just as well in **industry** and **workshops** as in **laboratories**. But Flex is also a comfortable solution in the **service** sector or at **cash desk workplaces**.
